SUMMARY

Data Analyst with professional experience using SQL and Python for data analysis, experienced in ensuring data quality, reconciling fragmented datasets into one source for analytics and modeling, and delivering interactive dashboards stakeholders can trust.

SKILLS

Programming: SQL (CTEs, window functions), Python (Pandas, NumPy, Scikit-learn, statsmodels, PyTorch), R
BI & Visualization: Power BI (Power Query), Tableau, Streamlit, Plotly
Data Engineering & Quality: Azure SQL, Azure Blob Storage, dbt, BigQuery, ETL/ELT, Data Validation
Analytics: Time-Series Forecasting, Regression, A/B Testing, Causal Inference, Cohort Analysis
Tools: AI-Assisted Development (Claude, Codex), Git, Power Automate

EXPERIENCE

Data Analyst (Consultant), Pierce Transit, Lakewood, WA — June 2025 - June 2026

- Built the Azure SQL database and its reusable KPI views, using raw, stage, and mart layers, multi-table joins, aggregations, subqueries, and built-in data quality flags, so finance, operations, and planning teams could pull consistent figures and ad hoc analyses from one source stored in Azure Blob Storage.
- Caught 84 rows of placeholder zeros in the maintenance cost table feeding indirect cost calculations by tracing the anomaly to its root cause, replaced them with real work-order data aggregated monthly, and added data quality checks to the pipeline so bad values could not reach downstream reporting.
- Forecast demand by testing linear regression and ETS models before selecting SARIMAX, which came within about 3% of actual demand on unseen data, and turned the results into a fare-policy recommendation presented directly to agency leadership.
- Built a Power BI dashboard and a Streamlit decision-support tool that let stakeholders run cost and fare scenarios interactively, and presented both live to agency leadership and the board.

Network Engineer, Helmut Comm, Sydney, NSW — Nov 2022 - Feb 2025

- Automated 3 daily and 2 weekly reports with Python-based reporting workflows, saving approximately 90 minutes of manual review time per workday.
- Maintained Power BI dashboards tracking network project metrics, updating data sources and queries and adding new metrics as projects evolved.

PROJECT EXPERIENCE

Transit & Rideshare Analytics Command Center | Python, statsmodels, Streamlit, Plotly — Live app | GitHub

- Built a five-page Streamlit dashboard on synthetic transit data that lets users compare four fare and cost scenarios against a recovery target, with plain-language signals, backed by a Python pipeline with six automated data checks and 12- and 24-month demand forecasts.

TaskFlow Growth Analytics | Python, BigQuery, dbt — Live app

- Built a BigQuery and dbt pipeline (staging, intermediate, and mart layers with custom SQL tests) on simulated B2B SaaS data to analyze funnel, retention, A/B tests, and churn.
- Found that a feature that appeared to drive a 9x lift in upgrades had a near-zero effect once selection bias was removed.

E-Commerce Database Analytics | Azure SQL, SQL, Python — GitHub

- Analyzed the Olist e-commerce dataset in Azure SQL using CTEs and window functions, including revenue tiers and rolling three-month revenue, plus RFM segmentation, cohort retention, and customer lifetime value, showing revenue is concentrated among a small group of top customers.

Seattle Rental Neighborhood Finder | Tableau, Python, GeoPandas

- Built an interactive Tableau tool using parameter actions and LOD expressions that guides renters through a step-by-step questionnaire and narrows a live choropleth map of Seattle's 53 neighborhoods to a personalized top 3 match.

EDUCATION

University of Washington, Tacoma, WA | Master of Science, Business Analytics (STEM) | GPA: 3.68 — Jun 2026

University of New South Wales, Sydney, NSW | Master of Engineering, Telecommunications Engineering — Feb 2021

Vellore Institute of Technology, India | Bachelor of Technology, Electronics and Communications Engineering — Nov 2017
